- ²⁵⁵ This great quote has been attributed to several Wyoming governors.
- ²⁵⁶ The paucity of physician referrals is a critical problem. Despite studies that demonstrate the effectiveness of physician referrals, few are willing to make the referral. In one study, less than a third of

- primary care doctors were willing to ask patients about drug or alcohol use. Another study in a major hospital witnessed a 47% reduction in substance abuse related accidents after the ER staff implemented alcohol and drug screening and referral. With respect to schools, it is interesting to note that in a survey conducted by the Center on Addiction and Substance Abuse (CASA), only 10% of middle or junior high school principals acknowledged drugs were a problem in their school. The number rose to 25% when the teachers were asked and to 53% when the students were questioned.
